Attached are my comments. I recognize that an in-depth review was not requested. Admittedly, some of my comments are rather persnickety. However, these suggestions do increase the accuracy of the text (eg., correct usage of dG).

Subject: Bottom-up section in animal cancer dose-response

Hi Brian and Sury,

Thank you for taking a(nother) look at the section on the bottom-up approach.

Please remember that Ravi is currently revising the animal cancer D/R section (in its entirety, including this section), so extensive edits are not required at this point. Rather, please just point out where the discussion points may need to be expanded or shored up (possibly using information in the TK section, Sury?), and, if possible, where there may be some unnecessary text/ arguments that are not essential (i.e., that we can delete).

Brian, next week we will be sending you the entire animal cancer section Ravi will have revised ~Monday for a more detailed review (thanks again).

As all of you know, we are sending David "something" cancer D/R-wise at the end of next week. It by no means needs to be the final version, but the clearer we can make it, the better his comments should be. Brian, I realize your comments may not be complete by then; that is fine, as we would prefer a sound (non-rushed) review.

Andrew
